

What the Heck is an LSV?

Go Green, Save Money and Have Fun with These Street-Legal Electric Vehicles

Look, on the street! It's a golf car. It's an automobile. No, it's a super vehicle known as the Villager™ LSV.

You may have seen these sassy rides around town. They're made by Club Car, the world's largest producer of electric vehicles and one of the first manufacturers in low speed vehicle (LSV) market.

LSVs represent a fast-growing mode of transportation.

While golf cars are generally limited to golf car lanes or designated low-speed roads within one mile of a golf course, LSVs can hit streets with speed limits of 35 mph or less in almost all states. What's more, LSVs can travel at a maximum of 25 mph; golf cars, 15.

Ideal for Short Trips and Many Other Applications

Open to sights, scents and sounds, LSVs are putting the fun back in driving. Residents of gated and retirement communities are driving LSVs instead of cars for short trips because LSVs are environmentally friendly, save on gas and fit their lifestyles.

Since LSVs are so compact and easy to maneuver and park, they're also great for small towns, motor home owners, college campuses,

military bases, industrial plants, and urban environments with congested driving and limited parking.

City planners and developers around the country are creating alternative vehicle communities to capture the benefits of LSVs and attract upscale retirees and others looking for a greener, more livable environment.

Replace a Gas Guzzler with an LSV

Costs to operate LSVs range from one to three cents per mile, while the fuel cost for gasoline cars in 2010 was 9 - 13 cents per mile. What's more, the Villager LSV can be charged through a standard 110-volt outlet and delivers up to 30 miles from a six-hour charge.

Cities from New York to California are using LSVs for meter reading, urban policing and many other functions.

Rules of the Road

Unlike golf cars, LSVs are classified as motor vehicles and regulated by the National Highway Transportation Safety Administration. They must have vehicle identification numbers and be registered and insured.

Manufacturers must equip LSVs with the following safety equipment:

- Automotive safety glass windshields
- Turn signals
- Mirrors
- Wiper blades
- Head and taillights
- Parking brakes
- Seat belts

Club Car vehicles are sold through our worldwide dealer and distributor network. Find an Authorized Club Car Dealer near you. Visit www.clubcar.com and select "Dealer Locator."
